

SAFETY & SECURITY TIPS ON THE GO

STAY SECURE WITH THESE TIPS

Have computer security programs running and regularly updated.

Install anti-virus software to protect against malicious software that can steal information such as account numbers and passwords.

Use the most secure process you can when logging into financial accounts.

Create “strong” passwords that are hard to guess, change them regularly and try not to use the same password or PINs on several accounts.

Be smart about where and how you connect to the Internet.

Public Wi-Fi networks and computers at places such as libraries and business centers can be risky if they don't have up-to-date security software.

Be careful when using smartphones or tablets.

Don't leave your mobile device unattended and use a device password or other method to control access if it's stolen or lost.

Ignore unsolicited emails asking you to open an attachment or click a link.

Cybercriminals are good at creating fake emails that look legitimate. Your best bet is to ignore unsolicited requests to open attachments or files.

Parents and caregivers should include children in their cybersecurity planning.

Talk with your child about being safe online, including the risks of sharing personal information with people they don't know and make sure the devices they use to connect to the Internet have up-to-date security.
